

I actually agree. For an MVP, the analytics I suggested earlier were too ambitious. The purpose of an MVP is to answer one question:

Can I easily save, organize, and keep track of my opportunities without missing deadlines?

Anything beyond that is a bonus.

I'd keep the analytics lightweight and focus on metrics that are already available from the data you're storing. Everything else (acceptance rates, trends, AI insights, productivity metrics, etc.) can wait until later.

Product Requirements Document (PRD)

Apply Away – Opportunity Vault

Version: 1.0 (MVP)

Status: Draft

1. Product Overview

Product Name

Apply Away – Opportunity Vault

Tagline

Your AI-powered personal opportunity vault.

Purpose

Apply Away is a personal AI-powered opportunity management system designed to help users collect, organize, track, and manage opportunities from different sources in one centralized dashboard.

Instead of manually keeping track of deadlines across WhatsApp, LinkedIn, Telegram, emails, and websites, the application extracts key information automatically, stores it in a structured format, and sends reminders before important deadlines.

The MVP is designed for **personal use only** and will later evolve into a multi-user SaaS platform.

2. Problem Statement

Opportunities are discovered across multiple platforms, making them difficult to manage.

Important deadlines are often forgotten, application requirements become scattered, and tracking progress manually is inefficient.

The goal of Apply Away is to become a single source of truth for every opportunity.

3. Goals

The MVP should allow the user to:

- Capture opportunities quickly.
 - Automatically extract important information.
 - Organize opportunities in one dashboard.
 - Track application progress.
 - View deadlines in a calendar.
 - Receive timely reminders before deadlines.
 - View simple analytics about saved opportunities.
-

4. Target User

Single User (Developer)

This version is built specifically for personal use.

Authentication, accounts, and multi-user support are intentionally excluded.

5. Out of Scope (MVP)

The following features are intentionally excluded from this release:

- User authentication
 - Multi-user support
 - Team collaboration
 - Browser extension
 - Mobile app
 - AI essay writing
 - Resume generation
 - Cover letter generation
 - Email synchronization
 - Opportunity recommendations
 - Payments
 - Public sharing
-

6. Functional Requirements

Module 1 – Opportunity Capture

Description

The user can quickly save opportunities from multiple sources.

Supported Inputs

- Website URL
- Plain text
- WhatsApp messages
- Telegram messages

- LinkedIn posts
 - X (Twitter) posts
 - Email content
-

Workflow

1. User pastes a URL or text.
 2. AI reads the content.
 3. AI extracts relevant information.
 4. Information is standardized.
 5. Opportunity is saved.
-

Module 2 – AI Information Extraction

The AI should automatically extract:

Basic Information

- Opportunity Name
- Organization
- Category
- Short Description

Categories include:

- Fellowship
 - Scholarship
 - Internship
 - Job
 - Grant
 - Competition
 - Research
 - Conference
 - Bootcamp
 - Training
-

Dates

Extract:

- Opening Date
- Deadline
- Interview Date (if available)
- Program Start
- Program End

Store:

- Original timezone
 - UTC timestamp
 - Converted Nigeria time (Africa/Lagos)
-

Eligibility

Extract:

- Eligible Countries
 - Education Level
 - Degree Requirements
 - Experience
 - Language Requirements
 - Age (if applicable)
-

Application Requirements

Examples:

- Resume/CV
 - Transcript
 - Passport
 - Recommendation Letter
 - Essay
 - Portfolio
 - GitHub
 - LinkedIn
-

Benefits

Examples:

- Funding
 - Stipend
 - Travel
 - Visa
 - Accommodation
 - Certification
-

Links

Store:

- Official Website
 - Application Link
-

Essay Questions

If the opportunity contains essay questions, save every prompt.

Module 3 – Opportunity Dashboard

Display all saved opportunities in a searchable table.

Columns

- Opportunity Name
- Organization
- Category
- Deadline
- Days Remaining
- Status
- Priority

Status

- Not Started
- In Progress
- Submitted
- Interview

- Accepted
- Rejected

Priority

- High
- Medium
- Low

The dashboard should support:

- Search
 - Filter
 - Sorting
-

Module 4 – Opportunity Details

Each opportunity should have its own page containing:

- Overview
- Description
- Eligibility
- Requirements
- Benefits
- Deadlines
- Essay Questions
- Links
- Personal Notes
- Checklist

Activity Log

Each opportunity should automatically maintain a timeline of important actions.

Examples:

- Opportunity Added
- Priority Updated
- Status Changed
- Notes Added
- Reminder Sent
- Application Submitted

This provides a complete history of the opportunity and lays the foundation for future analytics.

Module 5 – Calendar

Display all opportunity deadlines in a calendar.

Features:

- Monthly calendar view
 - Click a date to view opportunities
 - Multiple opportunities on one day
 - Open opportunity details from calendar
-

Module 6 – Reflection Dashboard

The Reflection Dashboard provides a visual summary of the user's application journey, helping them reflect on consistency, progress, outcomes, and areas for improvement.

The goal is to encourage regular reflection rather than provide complex business analytics.

Monthly Summary

Display summary cards for the selected month:

- 📁 Opportunities Saved
- 📁 Applications Submitted
- 🏆 Successful Applications (Acceptances/Wins)
- ❌ Rejected Applications

These cards provide a quick overview of the month's activity.

Monthly Activity Trend

Display a **line chart** or **grouped bar chart** showing, by month:

- Opportunities Saved
- Applications Submitted

This allows the user to quickly identify months with high or low application activity.

Example:

Monthly Activity

Application Outcomes

Display a **bar chart** comparing:

- Applications Submitted
- Acceptances/Wins
- Rejections

This provides a simple visual reflection of application outcomes over time.

Opportunity Breakdown

Display a **pie chart** (or donut chart) showing the distribution of saved opportunities by category.

Examples:

- Fellowships
- Scholarships
- Internships
- Jobs
- Grants
- Conferences
- Competitions
- Research Programs

This helps the user understand where most of their focus has been.

Upcoming Deadlines

Display a compact section showing:

- Due This Week
- Due This Month

Each item should include:

- Opportunity Name
- Deadline
- Days Remaining

This keeps the dashboard actionable without overwhelming the user.

Recent Activity

Display a chronological timeline of recent actions.

Examples:

- Opportunity Added
- Notes Added
- Priority Updated
- Status Changed
- Reminder Sent
- Application Submitted

This provides context for recent progress at a glance.

Monthly Reflection

At the end of the dashboard, include a dedicated reflection section.

The user can write a short note summarizing the month.

Example:

August 2026 Reflection

Applied to 8 opportunities this month, mostly research and leadership fellowships. I noticed that I delayed starting applications until the final week. Next month, I'll aim to begin applications earlier and improve my preparation before deadlines.

The system should save one reflection for each month, allowing the user to revisit previous months and observe personal growth over time.

Module 7 – Notifications

Automatically send reminder emails before deadlines.

Default reminder schedule:

- 14 Days
- 7 Days
- 3 Days
- 24 Hours
- 12 Hours

The reminder system must use the stored timezone information to ensure notifications are sent based on the user's local time (Africa/Lagos).

Module 8 – Duplicate Detection

Before saving a new opportunity, compare:

- Opportunity Name
- Organization
- Official Application Link

If a duplicate is found, prompt the user to update the existing record instead of creating a new one.

7. Database (Simplified)

Opportunities

- id
 - title
 - organization
 - category
 - description
 - eligibility
 - requirements
 - benefits
 - application_url
 - official_url
 - start_date
 - deadline
 - interview_date
 - original_timezone
 - deadline_utc
 - deadline_local
 - status
 - priority
 - notes
 - created_at
 - updated_at
-

Essay Questions

- id
- opportunity_id
- question

Activity Logs

- id
- opportunity_id
- action
- description
- created_at

Reminder Logs

- id
 - opportunity_id
 - reminder_type
 - sent_at
-

8. Tech Stack

Frontend

- Next.js
- TypeScript
- Tailwind CSS
- shadcn/ui

Backend

- Next.js Route Handlers
- TypeScript

Database

- PostgreSQL
- Prisma ORM

AI

- OpenAI API (Structured JSON Extraction)

Email

- Resend

Scheduler

- node-cron

Calendar

- FullCalendar

Hosting

- Vercel
 - Neon PostgreSQL
-

9. MVP Success Criteria

The MVP is successful if the user can:

- Paste a URL or copied opportunity text.
 - Have AI automatically extract and save structured information.
 - View and manage opportunities from a dashboard.
 - Open a detailed page for each opportunity.
 - Track changes through an activity log.
 - View deadlines in a calendar.
 - Receive timezone-aware email reminders.
 - See a simple analytics overview of saved opportunities.
 - Search, filter, sort, and update opportunities.
-

10. Future Improvements

AI Assistance

- AI opportunity fit analysis
- AI match score
- AI priority recommendations
- AI application strategy suggestions

Application Support

- AI essay brainstorming and review
- Resume tailoring
- Cover letter generation
- Interview preparation
- Smart application checklist

Automation

- Browser extension
- Mobile share extension
- Email inbox integration
- Google Calendar synchronization
- Push notifications
- WhatsApp/Telegram notifications

Document Management

- Document vault
- Reusable essay library
- Recommendation letter management

Analytics

- Acceptance rate
- Interview rate
- Application trends
- Productivity metrics
- AI-generated insights
- Success pattern analysis

Platform Expansion

- User authentication
- Multi-user support

- Cloud synchronization
- Team workspaces
- Shared opportunity boards
- Admin dashboard
- Subscription plans
